

MediScan AI · Transforming Medical Imaging Diagnosis

MediScan AI is an AI-powered diagnostic platform built for radiologists and hospital networks.

Problem:

Radiologists worldwide face extreme workload pressure, with burnout rates exceeding 60%. Manual image review is slow and prone to missed diagnoses. Hospitals lose an estimated \$28 billion annually due to diagnostic delays and misdiagnoses.

Solution:

MediScan AI deploys deep learning convolutional neural network models trained on 50 million anonymized medical images to detect cancer, fractures, and cardio-pulmonary conditions with 98.2% accuracy · outperforming average radiologist accuracy of 88.4%.

Business Model:

Enterprise SaaS B2B targeting hospital networks, radiology centers, and telemedicine providers. Annual contract licensing with per-scan pricing tiers.

Revenue Model:

Subscription licensing starting at \$120,000 per hospital per year, plus \$0.80 per scan processed. Projected Year 1 revenue of \$4.2 million from 35 signed hospital contracts.

Target Market:

Primary customers are hospital networks with 200+ beds in the US, EU, and Southeast Asia. Total addressable market of \$38 billion in medical imaging AI by 2028.

Technology:

Built on PyTorch and custom transformer vision models. DICOM-compatible integration with existing PACS systems. HIPAA-compliant cloud infrastructure on AWS with on-premise deployment options. FDA 510(k) clearance obtained for 3 imaging modalities.

Unique Value Proposition:

MediScan AI is the only radiology AI with FDA clearance across CT, MRI, and X-ray simultaneously. Integration with existing PACS reduces deployment time to under 72 hours versus 6 months for competitors.

Competitors:

Aidoc, Zebra Medical Vision, Enlitic, and traditional PACS vendors like Philips IntelliSpace.

Funding Required:

\$12 million Series A to fund clinical deployment in 200 new hospital sites, expand FDA clearance to 5 additional imaging modalities, and grow the engineering team from 18 to 45 engineers.

Market Traction:

35 signed hospital contracts generating \$1.8M ARR. 2.3 million scans processed to date. 94% customer retention after Year 1. Partnerships with Johns Hopkins and Mayo Clinic for clinical validation.
